

Summary

In short, the primary purpose of the IMPAK mouth guard system is to improve your quality of life. The IMPAK mouth guard reduces the negative impact that misaligned teeth and jaws can have on your body. It reduces stress on your spine to promote good posture, balance, and strength. A properly aligned body is less prone to injuries. And the IMPAK guard does it naturally!

Stabilize your golf posture with IMPAK Golf performance mouth guard.

Correct posture plays a vital role in golf, putting you in position for balanced, powerful, and consistent ball strike. M. Lamanna

The better your posture, the more likely you are to move properly during the swing, thus build club head speed and power. Golf magazine

Believe or not, posture has a positive influence on power production. Greg Norman

Body Form Follows Body Function

Great Body Form

Can my body perform more effectively? Can I increase my strength, balance and flexibility?

Can I run, cycle, swim and play golf better? Can my body develop a healthier form so I have less physical pain?

IMPAK performance mouth guard aligns your body from the top down to directly improves your physical performance. It allows the body to move in an optimal form. Over time the improved body function will change your body into a better form.

A properly aligned body is less prone to head, neck, shoulder, hip, knee and ankle injuries.

Also, IMPAK guard will increase and improve your innate physical strength, balance and flexibility. These elements are significantly more important in golf swings. Try it today!

The Neuroscience behind the IMPAK Golf performance mouth guard

Symmetry provides harmony and homeostasis in the neuromuscular system. In a healthy body the symmetrical components of the skeletal structure are parallel to each other: the base of the skull, plane of the teeth, shoulder plane, pelvic plane, knee, ankle, and bones of the feet. This balanced state provides better muscle recruitment leading to increased strength, balance and flexibility.

Any plane misalignment induces stress to the neuromuscular system and this directly affects the ability to hold the body upright. Therefore, the misalignment of the teeth planes can create stress and disharmony throughout other parts of the body.

When the upper and lower jaws are properly positioned, the desired structural alignment of the body is achieved. A properly positioned lower jaw will open the air way more, providing optimum amount of air needed for your activity.

The bottom line is that IMPAK guard treats the cause of postural distortion.

IMPAK Dentist Fitted Multi-Laminated Performance Mouth Guard

Not every mouth guard can enhance your performances. Regular sport mouth guards are made of simple plastic to prevent teeth from making contact. Another example is a boil and bite

IMPAK guard correcting postural distortion
The body form follows function...the more your body is in correct form the better the function.

guard. This guard simply conforms to your misaligned teeth and it does nothing to improve the alignment of your jaw. Only qualified dentists can provide IMPAK guards.
